

Passionate Software Developer with 6+ years of programming experience and over 3 years specializing in Frontend Development using React, Next.js, and modern JavaScript frameworks. Skilled in creating responsive, user-friendly applications with clean code and performance in mind. Recently explored Node.js and NestJS to gain deeper backend understanding and strengthen full-stack knowledge. Committed to continuous learning, problem-solving, and delivering high-quality digital solutions.

Education

syrian virtual university, damascus,syria في Bachelor of information technology enineering

حالياً - April 2019

Specialized in AI Machine Learning

Employment History

Middle East, Beirut,Lebanon-USA في Front-End Team Lead

🔗 • August 2025 - December 2025

- Led the frontend development of a large-scale multi-platform ecosystem, including an e-commerce marketplace, used-goods marketplace, video streaming platform, social networking features, and a digital asset trading interface
- Managed and mentored a frontend team, overseeing task distribution, code quality, and adherence to best practices to ensure consistent and scalable development
- Architected reusable component systems using React and Next.js, improving maintainability and accelerating development across multiple platforms
- Collaborated closely with backend teams, designers, and product managers to align technical implementation with business goals and delivery timelines
- Implemented responsive, high-performance user interfaces using Tailwind CSS, ensuring optimal user experience across devices
- Reviewed pull requests, enforced clean code standards, and optimized application performance for production environments

One Door company, damascus,syria في React,next js Front-End Web Developer

🔗 • January 2025 - December 2025

- Developed responsive landing pages and enterprise-level web interfaces using React and Next.js
- Delivered web solutions for both private companies and governmental entities, including the Ministry of Communications
- Built and optimized the company's main website with a focus on performance, scalability, and UI consistency
- Applied modern frontend best practices using Tailwind CSS and reusable component patterns

Noname company, Syria-Qatar في React,next js Front-End Web Developer

🔗 • June 2024 - January 2025

- Successfully designed and implemented modern websites and systems for internal companies and external clients using React and Next.js, improving user experience and performance
- Delivered highly interactive UIs by integrating advanced animations with GSAP, Framer Motion, and Three.js, enhancing customer engagement and retention
- Built responsive, scalable, and visually appealing applications with Tailwind CSS, ensuring cross-device compatibility and faster development cycles
- Collaborated closely with stakeholders to translate business needs into functional solutions, reducing delivery time and increasing client satisfaction

Mad Solutions, Damascus,Syria في React Front-End Web Developer

🔗 • January 2024 - April 2024

About 3 months of training in react web developing build projects and deploy it •

Noptechs, Istanbul,Turkey في Backend Odoo Developer

🔗 • December 2022 - August 2023

- Developed and customized Odoo modules to meet diverse client requirements, improving •
.operational efficiency across sales, inventory, and accounting
- Integrated Odoo with third-party systems and APIs, streamlining business workflows and •
.reducing manual processes
- Optimized backend performance and database queries, resulting in faster system response •
.times and improved scalability
- Collaborated with functional consultants and end users to deliver tailored ERP solutions, •
.increasing client satisfaction and retention
- Contributed to the company's success as an Odoo Gold Partner by ensuring high-quality •
.technical delivery and long-term system reliability

house of colors - Syria, Damascus,Syria في IT support specialist

🔗 • November 2021 - August 2025

- Provided technical support for printing systems and mobile applications, ensuring smooth •
.daily operations and minimizing downtime
- Configured, maintained, and troubleshoot printing software and hardware, reducing system •
.errors and improving efficiency
- Assisted in the deployment and support of a mobile application for printing services, •
.enhancing customer convenience and user adoption
- Collaborated with cross-functional teams to resolve technical issues quickly, increasing •
.overall system reliability and customer satisfaction

Skills

TECHNICAL PROFILE: HTML, CSS (Bootstrap), JavaScript, React, Next.js, Python, C++, C#, SQL, Redux, WordPress,Tailwind,Gsap,Framer Motion,Three js

SOFT SKILLS: Problem-Solving, Teamwork, Communication, Time Management, Adaptability, Critical Thinking, Creativity, Attention to Detail, Leadership, Continuous Learning

Projects

🔗 • Ministry of Communications - Admin Dashboard

Ministry of Communications - Admin Dashboard - React/TypeScript Appointment Management System Admin dashboard for managing appointments with the Minister of Communications. Built with React 19, TypeScript, and modern web technologies. Features: Built scalable React application with TypeScript, Zustand state management, and React Router v7 Implemented appointment management with approval/rejection workflows and rescheduling Created role-based user administration (Admin, Staff, Scanner) with JWT authentication and refresh tokens Developed performance analytics dashboard with metrics tracking (meetings, visitors, completion rates) Integrated multi-language support (English/Arabic) with RTL layout and dynamic language switching Designed responsive UI with Tailwind CSS and Framer Motion animations Configured Vite build system with TypeScript and performance optimizations Implemented protected routing with authentication guards and API integration layer Built calendar scheduling system with time slot management and meeting visualization Developed visitor check-in/check-out system with real-time status tracking Created file upload/download system for meeting attachments (presentations, documents, links) Implemented notes management system for meeting documentation Technologies: React 19, TypeScript, Zustand, Tailwind CSS, Framer Motion, React Router v7, Axios, Vite, date-fns, Lucide React, React Icons

🔗 • Middle East Platform

A multi-platform web application built with React 19 and TypeScript that combines e-commerce marketplace, used-goods marketplace, video streaming, social networking, and digital asset

trading. Features include: E-Commerce Marketplace: Built scalable product catalog with categories, variants, bundles, and stock management Implemented shopping cart with Zustand state management and server-side synchronization Developed checkout flow with address management, shipping options, and order processing Created store management system with store profiles, product listings, and coupon management Integrated wishlist functionality with persistent storage Used-Goods Marketplace: Built classified ads platform with image galleries, category filtering, and location-based search Implemented infinite scroll pagination with intersection observer for performance Created ad creation and management system with image upload and multi-image support Developed responsive listing cards with parallax tilt effects and animated transitions Video Streaming Platform: Implemented reels feature with vertical video playback, snap scrolling, and infinite feed Built stories system with image/video support, expiration timers, and interactive viewing Created video trimming tool using FFmpeg for client-side video processing Developed video upload and playback with optimized streaming and lazy loading Social Networking Features: Built community feed with posts, comments, reactions, and nested reply threads Implemented user profiles with tabs (Posts, About, Friends, Photos, Videos) Created stories creation interface with text, image, and video support with custom backgrounds Developed friend/follow system with user discovery and connection management Built channels system for group messaging with public/private channels and member management Digital Asset Trading Interface: Implemented auction system with real-time bidding, countdown timers, and bid history Created auction creation with image galleries, descriptions, and time-based expiration Developed winner determination system with automatic notifications and purchase completion Built auction listing pages with filtering, sorting, and detailed auction views Real-Time Communication: Integrated Pusher for real-time messaging, notifications, and live updates Implemented Agora SDK for video and voice calling with screen sharing capabilities Built chat interface with message history, typing indicators, and file attachments Created channel-based group messaging with member management and permissions Additional Features: Implemented multi-language support (English, Arabic) with i18next and context-based translations Built authentication system with JWT, Google OAuth, password reset, and email verification Created jobs marketplace with job listings, applications, and opportunity management Integrated Google Maps and Leaflet for location-based features and address selection Implemented responsive design with Tailwind CSS and mobile-first approach Added smooth animations and transitions with Framer Motion and GSAP Built infinite scroll pagination with custom hooks and intersection observer Created loading states, error handling, and skeleton loaders for better UX Implemented protected routing with role-based access control Built API integration layer with Axios, retry logic, and error handling Added image optimization, lazy loading, and performance optimizations Technologies: React 19, TypeScript, Vite, React Router v7, Zustand, Axios, Framer Motion, GSAP, Tailwind CSS, Ant Design, Material-UI, i18next, Pusher, Agora RTC SDK, FFmpeg, React Leaflet, Zod, React Hook Form, Lucide Icons, Swiper, Three.js, Recharts, SweetAlert2, Emoji Picker, React Easy Crop

➤ • Ministry of Communications - Visitor Website

Ministry of Communications - Visitor Appointment Booking Portal - React/TypeScript Public Booking System Public-facing web application for booking appointments with the Minister of Communications. Built with React 19, TypeScript, and modern web technologies. Features: Built responsive React application with TypeScript, React Router v7, and multi-step form workflow Implemented multi-step appointment booking system with stepper navigation (Visitor Info → Meeting Details → Date/Time → Confirmation) Created interactive calendar date picker with time slot selection (9 AM–4 PM, 30-minute intervals) Developed drag-and-drop file upload system supporting multiple file types (general documents, presentations, intro files) Integrated form validation with real-time error handling and user feedback Designed responsive UI with Tailwind CSS and Framer Motion animations Configured Vite build system with TypeScript and performance optimizations Implemented multi-language support (English/Arabic) with RTL layout and dynamic language switching Built appointment request submission with multipart/form-data API integration Created visitor information collection system with attendee management Developed meeting type selection (standard and special meetings) with conditional workflows Implemented external links management for meeting-related resources Technologies: React 19, TypeScript, Tailwind CSS, Framer Motion, React Router v7, Axios, Vite, date-fns, Lucide React, React Icons

➤ • One Door Website

One Door Company Website - React/TypeScript Corporate Portfolio Platform A corporate portfolio website built with React 18 and TypeScript to showcase services, projects, team members, and company activities. Features include: Built scalable React application with TypeScript, React Router, and TanStack React Query Implemented multi-language support (English, Arabic, Turkish) with context-based i18n Created dynamic project showcase with API integration and detail pages Developed interactive team members section with pagination and featured members Integrated real-time data fetching with React Query and Axios HTTP client Designed responsive UI with Tailwind CSS and shadcn/ui (Radix UI) components Implemented smooth animations and transitions with Framer Motion Configured Vite build system with development proxy and performance optimizations Created interactive activities timeline with event details navigation Built comprehensive sections: Services, Clients, Industries, Achievements, Testimonials Implemented protected routing and API integration layer with retry logic Added loading states, error handling, and skeleton loaders for better UX Technologies: React 18, TypeScript, Vite, React Router, TanStack React Query, Axios, Framer Motion, Tailwind CSS, Radix UI, shadcn/ui, React Hook Form, Zod, Lucide Icons

➤ • SetAlkel E-Commerce website

Developed a modern, multilingual e-commerce platform for SETALKEL, a frozen foods and vegan products company. The application serves as a comprehensive digital storefront with international reach, supporting customers and agents across multiple regions with robust authentication, order management, and product catalog features

Key Technologies & Stack Frontend Framework: Next.js 15 with React 19, App Router architecture Styling: Tailwind CSS with responsive design State Management: React Context API + TanStack React Query v5 for server state Internationalization: next-intl supporting 6 languages (English, Arabic, French, Korean, Polish, Turkish) Authentication: Firebase Authentication with secure token management UI Components: Radix UI primitives for accessibility Data Fetching: Axios with TanStack Query for caching and synchronization Deployment: Express.js server with custom deployment scripts Core Features Implemented Multi-language Support: Complete internationalization with RTL support for Arabic User Authentication System: Secure login/register with email verification and role-based access (customers/agents) Product Management: Dynamic product catalog with categories, search, and filtering Order Management: Complete order flow from cart to checkout with persistent state Responsive Design: Mobile-first approach with cross-device compatibility Real-time Notifications: Firebase Cloud Messaging integration Geographic Features: Country selection with React Google Maps integration Technical Achievements Performance Optimization: Implemented server-side rendering and static generation for optimal loading times Code Architecture: Modular component structure with reusable UI primitives and context providers State Persistence: LocalStorage integration for cart and user session management API Integration: RESTful API communication with backend services Modern React Patterns: Utilized React 19 features with proper error boundaries and loading states Development Practices Component-Based Architecture: Organized codebase with separated concerns and reusable components TypeScript-Ready: Structured for easy TypeScript migration with proper prop handling Accessibility: WCAG-compliant UI components using Radix UI primitives SEO Optimization: Proper meta tags, structured data, and internationalized URLs Version Control: Git workflow with organized commit history and deployment scripts Business Impact Created a scalable platform supporting international expansion Implemented user-friendly interface reducing customer acquisition friction Built comprehensive order management system for streamlined operations Established foundation for multi-tenant agent/customer relationship management Key Skills Demonstrated Advanced React.js and Next.js development International application development (i18n/l10n) Modern CSS frameworks and responsive design API integration and state management Firebase services integration Performance optimization and SEO Component library development Cross-browser compatibility

➤ • SetAlkel Dashboard

SetAlkel Dashboard - React/TypeScript Enterprise Management System

Developed a comprehensive enterprise dashboard using React 18, TypeScript, Redux Toolkit, and Zustand for managing global product operations, user administration, and order tracking. Key features include

Built scalable React application with TypeScript, Redux Toolkit, and React Query • Implemented complete product management system with CRUD operations • Created role-based user administration with secure authentication (JWT) • Developed real-time order tracking and analytics dashboard • Integrated multi-language support (16 languages) with i18next • Designed responsive UI with Tailwind CSS and Material-UI components • Configured Vite build system with performance optimizations • Implemented protected routing and API integration layer
Technologies: React 18, TypeScript, Redux Toolkit, Zustand, Tailwind CSS, Material-UI, React Query, Axios, Vite, i18next, Firebase

🔗 • React To Do App

A Beautiful to do app with confetti and progress data. Responsive design components ability to set end time to the tasks to being uptodata dark mode and light mode toggle

🔗 • Car Game

A Car Game using one html file includes the styles and javascript codes To win the race you must reach the finish line before time runs out. 3d model for the car open world driving

🔗 • Astro Codez

AstroCodez Corporate Website - React/TypeScript Animated Portfolio Platform A corporate portfolio website built with React 18 and TypeScript to showcase services, team, and company processes. Features include: Built scalable React application with TypeScript, React Router, and TanStack React Query Implemented advanced animations with GSAP (GreenSock) including scroll-triggered reveals, parallax effects, and timeline animations Created smooth scrolling experience with Lenis library integrated with GSAP ScrollTrigger Developed interactive UI components using Radix UI and shadcn/ui design system Implemented code splitting and lazy loading with React Suspense for optimal performance Designed responsive UI with Tailwind CSS and mobile-first approach Created custom React hooks for magnetic cursor effects, parallax scrolling, and scroll reveal animations Built comprehensive sections: Hero, About, Process, Services, Why Choose Us, Team, Contact, and Footer Integrated contact form with EmailJS, Google reCAPTCHA v3, and real-time validation Implemented SEO optimization with React Helmet Async, structured data (JSON-LD), Open Graph, and Twitter Card meta tags Configured Vite build system with manual code splitting, chunk optimization, and performance enhancements Created cosmic-themed loading animation with GSAP-powered transitions and progress tracking Added interactive elements including 3D tilt effects, magnetic buttons, and ambient particle effects Implemented scroll progress indicator and smooth section navigation with active state tracking Built glassmorphism UI components with gradient overlays and premium visual effects Added accessibility features including skip-to-content links and semantic HTML structure Technologies: React 18, TypeScript, Vite, React Router, TanStack React Query, GSAP, Lenis, Tailwind CSS, Radix UI, shadcn/ui, React Hook Form, Zod, EmailJS, Google reCAPTCHA v3, React Helmet Async, Lucide Icons
